

TAKING PURITY AND
QUALITY OF OMEGA-3
CONCENTRATES TO
THE **NEXT LEVEL**

QUALITY YOU CAN SEE

In Golden Omega we always go one step beyond. Our proprietary process allow us to offer Omega-3 concentrates, which are extremely clear, improving purity to the next level. All our EE concentrates will now typically have Gardner color 1 or below and all the TG concentrates will typically have Gardner color 2 or below.

ASTM D1209

HOW DO WE ACHIEVE THAT LEVEL OF PURITY?

This proprietary process allows us to remove in a much deeper way some unwanted compounds in the oil and therefore is directly related to a next level of purity in our concentrates.

As a result, all our concentrates are, not only consistently below 5 in TOTOX and with an outstanding sensory profile, which has been our permanent commitment, but also now with an extremely clear appearance, almost transparent.

These great developments are the result of our key advantages, related to our nearness to the source, strong R&D orientation, diverse patent portfolio and state-of-the-art facility.

The continuous improvement in the quality and purity of our Omega-3 concentrates is our motivation and a powerful tool for our clients to position their final Omega-3 products in the very high end of the quality range.
